Technical Instruction No-06

During a Technical Audit of a Project relating to construction of a runway, taxiway, apron and allied works, by CTE, it has been observed that at times, there is a need to bring out the methodology to be adopted for execution of the work also. As per Para 10.5 of 'Works Manual' the contents under Detailed Estimate, should contain reasons for taking up the work along with design, scope, rate, method etc.

Now in some cases, specially where cutting and filling of earth is involved, it would be definitely helpful, if disposal (of surplus earth after filling it at site) and source (for procurement of additional earth) is clearly mentioned not only to achieve economy but to minimize time and effort, as well.

Therefore, the procedure and methodology for execution of inter-related items of works should be brought out in Detailed Estimate and TS explicitly.

These instructions may be brought to the notice of all concerned.
